Afrikaans

LEAH TWIGG
Junior Front-end Developer

👤 About Me

I am a Junior Front-end Developer based in Cape Town, South Africa. I have been passionate about coding since my first computer class in school. I am eager for opportunities to grow my skill set along side this everchanging industry.

💼 Projects I have created

DEC - 2024

Dictionary App

The Dictionary App was coded using HTML, CSS and React. It provides the phonetics, synonyms, pictures and the definition in terms of nouns and verbs.

NOV - 2024

React Weather App

This Weather Application is a React Application. Meaning that while it is also coded with HTML and CSS, it uses React and JSX instead of vanilla JS. It uses two APIs: one to call the current weather and a 5 day forecast of any city in the world. And one to display corresponding weather icons.

SEPT - 2024

AI Poem Generator App

The AI Poem Generator Application was a bit more intricate to bring to life. It was coded with HTML, CSS and JavaScript. Using an API to recall the poem generated by an AI client, it displays a 4 line Afrikaans Poem or as it's called in Afrikaans a Gedig.

AUG - 2024

Weather App

The Weather Application was coded using HTML, CSS and JavaScript. It uses an API to call the current weather and a 5 day forecast of any city in the world.
